Yazaki – CONNECT to the Future

Yazaki was founded in Japan in 1929 and has since been a family-owned company. Today it is a market leader in the area of automotive wiring harness systems and supplies all major OEMs with innovative solutions.
More than 290 000 committed and highly motivated employees working at 487 locations in 45 countries contribute to Yazaki's global success.

With the term EEDDS (Electrical/Electronic Distribution and Display Systems), Yazaki combines all key technologies to offer its customers modern and customized solutions in the areas of wiring systems, components, electronics, instrumentation and high voltage. This requires permanent innovation. The guiding principal here is the vertical integration and the constant optimization of products, processes and services.
Dedicated teams of specialists analyze customer requirements and develop suitable solution strategies using our in-house architectural software epdsPRO.

Yazaki's customers value the outstanding expertise in the field of consulting, development, industrialization and manufacturing. Special attention is always paid to a reasonable balance between our customers' needs and environmental responsibility. The solutions we develop are assessed and optimized with regard to product portfolio, complexity, costs, producibility as well as logistics to turn a good idea into a sustainable and technically stable strategy.
This ability combined with decades of experience in power distribution, information distribution and production technology enables Yazaki to turn even highly innovative approaches into technologically advanced products.

By using state-of-the-art technology, Yazaki connects its customers with the future – worldwide.
