

Roll out of „SupplyOn“ project management WEB application (APQP)

Dear Supplier,

As one of Yazaki Europe LTD initiatives to continuously improve superior quality of products and services, we are applying the prevention versus detection philosophy.

It is in both our interests to tap the full potential of preventive methods and to follow project and product developments, in a most efficient and professional way.

- We have decided to apply web based project management software for future project – and development activities and will roll out a new application starting Year 2008. Therefore, we have chosen "SupplyOn" as our professional partner for the development, installation and service of an internet platform, that enables us to better collaborate in APQP/PPAP and all project or advanced quality activities.

It is our expectation that all our European suppliers participate in this platform, in order to benefit from:

- increased quality and transparency of data and project status
- faster data exchange leading to time savings and cost reductions
- participation in a worldwide communication platform in the automotive industry
- seamless electronic communication integrated in the Yazaki-Europe development processes.

You will receive in the near future an electronic invitation and we ask you to confirm your access, granted by "SupplyOn", to the Yazaki APQP platform.

Thank you in Advance

With Kind Regards

Michael Lauterbach
Supplier Quality Project Manager Europe

Gunther Cremers
Advanced Purchasing Manager Europe
