Roll out of the new combined quality and logistics score card

Dear Supplier,

With today's submission of your score card for the month May 09 we would like to announce several changes that have been made within our supplier performance monitoring and scoring system.

The attached score card will show your current performance rating by combining several quality and logistic criteria's.

Further to this you will receive the revised Yazaki Europe Ltd. Logistic Requirements. The compliance with these requirements will become a crucial part of the future supplier key performance indicators.

The weight of every single performance indicator has been revised in order to prioritize and to focus on the new objectives.

All red/yellow tone colors refer to quality, while blue tone colors refer to logistic related performance criteria's.

The above mentioned adjustments are a result of Yazaki Europe's initiatives to continuously improve performance and process efficiency and a consecutive reaction to the current automotive economic market trends.

If you have any questions related to the score card, our supplier performance monitoring or supplier quality assurance / improvement strategies please contact your respective Supplier Quality Engineer for further clarifications.

We kindly ask you to actively join us in facing the future challenges knowing that we can count on your continued partnership.

Thank you in advance

With Kind Regards

i.V. Michael Lauterbach
Manager Supplier Development

i.V. Zeljko Glisin
